Which Product?

Whether it's ambient, mood or accent lighting that is needed there is a downlighter product to suit.

Fixed Downlighters are used to provide an ambient or general light in a space - the light we need for seeing to move around.

A Kick-reflector wallwasher matches the look of its partner downlighter. Kick-reflector technology helps distribute light across a wall.

A Lens wallwasher will match the opening size of its partner downlighter and give a broader spread of light over the lit surface.

Directional downlighters match the look of its partner downlighter. They are good for high-lighting objects or art work in the room or on the walls.

All DAL downlighters have deep cones. This detail provides good visual cut-off, reducing the chance of glare from the LED.

Some products also have a choice of reflector finish.

- Specular Silver and Black cones give a very low glare, dark light effect. When the light is on it will still appear off
- Spectro-silver cones are still low-brightness, with just a hint that the light is on
- Satin Silver and Gold appear a little brighter in the ceiling and add a cooler or warmer look
- White cones and finishes give a brighter look to the fixture aperture.
