

DESIGNED ARCHITECTURAL LIGHTING
HOTELS

HOTEL LIGHTING

Hotel lighting is at the heart of lighting design. It is far more than just safe levels and even illumination. The lighting has to work with the architectural and interior design detail, creating the right mood and atmosphere for every type of area in a hotel, which maybe the height of luxury, a hi-trend design concept or a brand style.

Using a selection of light fixture types to create layers is an effective approach, enabling easy changes for the time of day or the occasion via a control system.

Which Product?

Fixed Downlighters are used to provide an ambient or general light in a space - the light we need for seeing to move around.

A Kick-reflector wallwasher matches the look of its partner downlighter. Kick-reflector technology helps distribute light across a wall.

A Lens wallwasher will match the opening size of its partner downlighter and give a broader spread of light over the lit surface.

Directional downlighters match the look of its partner downlighter. They are good for high-lighting objects or art work in the room or on the walls.

All DAL downlighters have deep cones. This detail provides good visual cut-off, reducing the chance of glare from the LED.

Some products also have a choice of reflector finish.

- Specular Silver and Black cones give a very low glare, dark light effect. When the light is on it will still appear off
- Spectro-silver cones are still low-brightness, with just a hint that the light is on
- Satin Silver and Gold appear a little brighter in the ceiling and add a cooler or warmer look
- White cones and finishes give a brighter look to the fixtures' aperture.

Coveline linear products can be integrated within the furniture or architecture.

DAL also design and manufacture custom lighting solutions.
